Master Care Plan
Platform Integration
Rough Order of Magnitude (ROM)
June 1, 2022

Overview

After meeting with Debra Draves and reviewing the Software Integration Requirements, it is Productive Programming, Inc.'s understanding that Master Care would like to integrate current databases into Sales Force, as well as integrate with Outlook and RingCentral.

The integration will provide access to the existing platform and deliver services to allow for the import and export of the new TEL/MIF data as well as existing records.

Scope

The system will include the development of the platform as well as all testing and reporting. Project completion will be demonstrated by the successful integration of data from both systems which will be evident on screens and in the reporting.

Proposal

Productive Programming, Inc. is confident we can provide an efficient and cost-effective solution and are looking forward to working on this project. We estimate this project development cost to be $13,000 to be completed by July 31, 2022.

Next Steps

Productive Programming, Inc. is pleased to begin this project immediately, by initiating the research and documentation of the data elements to be integrated and designing the process workflows. A deposit of $3,500 is required at project initiation.

Thank you for your consideration.
